

VELscope:

The Two-Minute Exam
That Could Save Your Life

How many little sores do we find in our mouths? Dozens? Hundreds? More? Most of the time we ignore them, and they simply go away.

But sometimes our mouths keep secrets. That's why we use the VELscope Enhanced Oral Assessment system.

The VELscope

- Improves our assessment of your overall oral health.
- Helps ensure that the delicate tissues of your mouth are healthy.
- Helps protect you from oral disease, including oral cancer.

All this in two minutes, with no rinses, stains or discomfort.

70% of cases
of oral cancer
are caused by

HPV

Have you been
Screened this year?

Early Detection Matters

BE YOUR OWN

hero.

VELscope

for a Clean Bill of Health

- Helps dental professionals find oral mucosal abnormalities, including oral cancer.
- Over 10,000,000 examinations performed.
- Recognized by the World Health Organization.
- A powerful tool for assisting in the discovery of oral abnormalities.

Regular Oral Screenings Could Save Your Life

"Adding the VELscope to our diagnostic protocol has been extremely useful and resulted in detection of dangerous lesions that would have otherwise been undetected."

— Edmond L. Truelove DMD, MSD,
Former Chair & Professor,
Oral Medicine, School of Dentistry,
University of Washington

Oral Cancer and Oral Diseases

The VELscope helps us identify oral disease early, while it's still easy to treat.

One of the VELscope's most important tasks is to help locate areas that might, if not treated, progress to oral cancer.

- Found early, oral cancer's 5-year survival rate is good: approx. 83%.
- Found late, oral cancer's 5-year survival rate is poor: approx. 32%.
- Clearly, finding oral cancer in its early stages is key to survival.

The VELscope is a tool for the early discovery of oral disease, including precancer and cancer.

Risk Factors

Tobacco products, along with alcohol, are also well known causes of oral cancer.

Why Use the VELscope?

- The VELscope's blue light stimulates natural fluorescence in the soft tissues of your mouth.
- Natural fluorescence, seen through the VELscope, allows dental professionals to see disease not visible with the naked eye.
- The VELscope helps us discover oral disease BEFORE it can be seen under ordinary light.

"I never smoked, I considered myself healthy and would never assumed I would be at risk. Come to find out, most of us are at risk."

— Amber Young
Oral Cancer Survivor
